Student Name	Kurstine Mariella Castaneda
Group	MiniOS Omega
Assigned Role	User/System Developer

1. What did I contribute to the project?

I contributed to the development of the system by implementing key features, handling errors, conducting testing, and assisting with the documentation. I helped ensure that the system functions properly and provides accurate information to the users. As well as, editing the video demo.

2. What features did I personally develop?

I worked on the following features:

- Login – Implemented the login functionality to allow users to access the system.
- whoami – Developed the feature that displays the current user's identity or account information.
- systeminfo – Implemented the feature that displays relevant system information. Error
- Handling – Helped manage errors and provide appropriate responses when issues occur.
- Testing – Tested the system's features to identify errors and verify their functionality.
- Documentation Assistance – Assisted in preparing and organizing the project's documentation.

3. What problems did I encounter?

I encountered challenges in implementing the features correctly, ensuring that the system responded properly to different inputs, and identifying errors during testing. I also needed to ensure that the features worked consistently with the rest of the system. Syncing the screen recordings with the voice-over was difficult while editing the video.

4. How did I solve those problems?

I addressed these challenges by reviewing my code, checking for errors, testing the features repeatedly, and making necessary corrections. I also coordinated with my groupmates to ensure that my contributions were compatible with the other parts of the system. I trimmed and aligned the clips on the video timeline, and rechecked the video with the group before finalizing it.

5. What did I learn from this project?

Through this project, I improved my programming, debugging, and testing skills. I also learned the importance of proper error handling, clear documentation, teamwork, and communication in system development. This experience helped me better understand my responsibilities as a User/System Developer. And to edit a video demo that explains the project.

6. Evidence of my contribution

* Source code for the login feature

* Source code for the whoami command

* Source code for the systeminfo command

* Error-handling implementation

* Testing results and screenshots

* Technical Documentation

*Video Demo
